

**DATASHEET**

**Durit**

Durit is available in two standard widths - 12mm and 15mm - and also comes with a self-adhesive backing. The standard thickness is 1 mm thick; custom widths are also available. Durit is less hard and more flexible than Siglaha. It is a good insulator and has lower thermal conductivity than Siglaha or Cover Strip. It is also durable and suitable for machines that operate with long heating cycles or constant heat. Additionally, it has an operating temperature range of up to 400°C. This material is best suited for applications where cool-down rate is not critical.

<b>Durit Technical Specs</b>	
Available Thickness	1.0mm
Width	12 & 15mm Standard
Temperature Use	400°C
Compression Strength	25 N/mm <sup>2</sup>
Thermal Conductivity	0.40 W/mK
